SKY & TELESCOPE INDEX to Volume 81

January, 1991, pages 1-120 **February,** 121-232 **March,** 233-344
April, 345-456 **May,** 457-568 **June,** 569-680

Titles

Albert Ingalls and the ATM Movement, *Thomas R. Williams,* 140
Astro: Science in the Fast Lane, *Stephen P. Maran,* 591
Did Sunspot Maximum Occur in 1989? *Patrick S. McIntosh,* 21
Einstein's Fudge Factor, *Sten Odenwald,* 362
Enigma of Shadow Bands, The, *Johanan L. Codona,* 482
Everyone's Guide to Cosmology, *Paul Davies,* 250
Gamma Persei Eclipsed! *R. F. Griffen,* 598
Gamma Ray Observatory, The, *Donald A. Kniffen,* 488
Globular Clusters: Fads and Fallacies, *Raymond E. White,* 24
Globular Clusters in Distant Galaxies, *William E. Harris,* 148
Gravity Is My Telescope, *Rudolph E. Schild,* 375
Hubble's Agony and Ecstacy, *Richard Tresch Fienberg,* 14
King of Comet Finders, The, *John E. Bortle,* 476
Light Echoes of Nova Persei 1901, *James E. Felten,* 153
Lunar Transient Phenomena, *Winifred Sawtell Cameron,* 265
Mars Poses for the Hubble Telescope, *Richard Tresch Fienberg,* 471
Myth of Overgrown Spirals, The, *Halton C. Arp* and *David L. Block,* 373
New Look at Old Worlds, A, *J. Kelly Beatty,* 269
Orbital Science's "Bermuda Triangle," *Thomas J. Sherrill,* 134
Plates, Pluto, and Planets X, *Clyde W. Tombaugh,* 360
Prime-Time Astronomers, *Stuart J. Goldman,* 472
Saturn's Great White Spot Spectacular, *Stephen James O'Meara,* 144
Sky-Gazer's Almanac 1991, 59
Stunning Planet Images from Earth, *Alan MacRobert,* 583
Ten Top Telescope Ideas of 1990, 31
Two Meteor Projects for Amateurs, *Jack Drummond, Kevin L. Reed,* and *Michael J. Gaffey,* 478
U. S. Astronomy's Next Decade of Discovery, *John N. Bahcall,* 584
Who Numbered Flamsteed's Stars? *Morton Wagman,* 380
Wish List for the 1990's, A, *Ronald A. Schorn,* 587

Authors

A. M., see *MacRobert, Alan*
Arp, Halton C., and *David L. Block,* The Myth of Overgrown Spirals, 373
Bahcall, John N., U. S. Astronomy's Next Decade of Discovery, 584
Beatty, J. Kelly, book review, 43
New Look at Old Worlds, A, 269
Beaury, John C., letter, 125
Benton, Julius L., Jr., Observing Saturn in 1991, 404
Bieda, Stephen W., Jr., letter, 5
Block, David L., see *Arp, Halton C.*
Borden, Jack, Wanted: Skywatchers, 572
Bortle, John E., Comet Digest, 106, 447, 666
King of Comet Finders, The, 476
Bracher, Katherine, letter, 349
Brescia, Keith, letter, 574
Briggs, John W., Rebirth of the Snow Telescope, 206
Burbidge, Geoffrey, book reviews, 45, 609
Cameron, Winifred Sawtell, Lunar Transient Phenomena, 265
Chaikin, Andrew, book review, 497
Church, John A., Great Conjunctions of Jupiter and Saturn, 305
Clark, Gail O., letter, 6
Codona, Johanan L., The Enigma of Shadow Bands, 482
Comba, Paul G., letter, 350
Curtis, Luke, letter, 125
Davies, Paul, Everyone's Guide to Cosmology, 250
D. di C., see *di Cicco, Dennis*
Della Prugna, Franco, A Monte Carlo Approach to the Ronchi Test, 416
di Cicco, Dennis, Last July's Solar Eclipse, 104
Next-Generation Telescope for Amateurs, The, 35
Powerful CCD Camera for Amateurs, A, 257
Update on Schmidt-Cassegrain Telescopes, An, 601
Dodson, Steve, Simple Classroom Telescopes, 311
Doescher, Russell L., see *Olson, Donald W.*
Drummond, Jack, Kevin L. Reed, and *Michael J. Gaffey,* Two Meteor Projects for Amateurs, 478
Dunham, David W., America's Last Pleiades Occultation, 292
Lunar Occultation Highlights for 1991, 68
Naked-Eye Occultation of Antares, A, 180
Planetary Occultations of Stars in 1991, 72
East, George H., Jr., A New Questar Drive Too, 604
Evans, David S., letter, 238
Fastenau, William, see *Rosenberg, Leo*
Federer, Charles A., Jr., letter, 237
Felton, James E., Light Echoes of Nova Persei 1901, 153
Ferris, Timothy, letter, 461
Fienberg, Richard Tresch, Hubble's Agony and Ecstacy, 14
Mars Poses for the Hubble Telescope, 471
"New, Improved" Portable Observatory, A, 495
Two Different Great Observatories, 491
Fienberg, Richard Tresch, Alan MacRobert, and *Roger W. Sinnott,* Ticked Off about Telescopes, 124
Freeman, Jay Reynolds, Group 70 Update, 548
Fried, Bart, The Masterful Techniques of John A. Brashear, 432
Gaffey, Michael J., see *Drummond, Jack*
Gillies, George T., book review, 42
Goldman, Stuart J., Astro's Future in Question, 596
Prime-Time Astronomers, 472
Green, Darrell W., book review, 164
Griffen, R. F., Gamma Persei Eclipsed! 598
Harbour, David A., letter, 461
Harrington, Phil, An Observer's Guide to Diffuse Nebulae — III, 440
Harris, William E., Globular Clusters in Distant Galaxies, 148
Hazen, Robert M., and *James Trefil,* Astronomical Literacy, 348
Hewish, Dean R., letter, 573
Hoffelder, T. C., letter, 237
Houston, Walter Scott, Deep-Sky Wonders, 110, 223, 333, 444, 670
Hudek, John A., letter, 383
Hughes, David W., book review, 498
Hunten, Donald M., book review, 160
Isles, John E., letter, 573
Jones, Kenneth Glyn, book review, 386
Keel, William C., book review, 274
Klein, Karl-Hermann, An Observing Seat for Two Telescopes, 544
Kniffen, Donald A., The Gamma Ray Observatory, 488
Knott, M. Leon, Bring Back the Planetarium! 4
Kohman, Truman P., letter, 350
Kresak, Lubor, book review, 384
Krupp, E. C., book review, 272
Laing, Drummond, letter, 573
Laird, Edgar S., see *Olson, Donald W.*
Lang, Kenneth R., book review, 278
Levy, David H., StarTrails, 89, 217, 314, 426, 538, 658
Lippincott, Robert W., III, letter, 350
Lodstrom, Carl G., letter, 383
Lovi, George, Rambling Through the Skies, 57, 175, 287, 399, 511, 621
Lunine, Jonathan I., book review, 607
MacRobert, Alan, book review, 278
Comets This Month, 297
Great July Solar Eclipse, The, 71
Lutetia Flies by M95, 516
1991 Planet Preview, A, 66
Rate Your Observing Site, 262
R Serpentis at Maximum, 517
Spring Galaxy Star-Hop, A, 370
Stunning Planet Images from Earth, 583
Sun, Moon and Planets in . . . (current month), The, 64, 178, 290, 402, 514, 628
Sunrise on Ptolemaeus, 631
Two Asteroids near Jupiter, 183

Departments and Features

Amateur Astronomers —
Astronomy Day 1990, 536
Bird's-Eye View of Totality, 87
Calendar of Events, 218, 429, 540, 661
Learning Astronomy in Later Years, 215
Professional Amateurs, The, 656
Simple Classroom Telescopes, 311
StarTrails, 89, 217, 314, 426, 538, 658
World News, 423

Astronomical Computing —
Columbus and the Sky of January 17, 1493, 81
Flight of a Long-Enduring Fireball, 640
Focus and Collimation: How Critical? 528
Great Conjunctions of Jupiter and Saturn, 305
Monte Carlo Approach to the Ronchi Test, A, 416
Path-Difference Calculations, 530
Rainbow Simulator, 199
Review Corner, 201, 532, 642
Samuel Pepys and a "Flying Dragon," 642

Astronomy Express —
Astronomy and Society, 470
Astro Rides High, 247
Astro's Ultraviolet Views, 359
AXAF Science Center, 582
Comet Halley Erupts, 470
Cosmic Close Call, 359
Eight-meter Leapfrog, 470
Explorer Retired, 582
Galactic Center Found? 13
Galileo Glimpsed, 247
Home for the VLT, A, 133
Hubble Repair Delayed, 470
Jupiter's Sodium Cloud, 247
Keck Does It! 133
Light-Pollution Star Watch, 133
Lunar Core? 582
Midget Mars Rovers, 582
More Hubble Trouble, 247
More Martian Snow, 13
Neptune's Satellites Named, 13
New Distance to the LMC, 359
Pluto and Charon, 13
Queen of Comet Finders, The, 470
Rosat's Bad Attitude, 470
SETI Reprieve, 13
Stonehenge Facelift, 582
Ultrafast Quasar Blast, 359
Ulysses Settles Down, 470
Venus Crater Contest, 582
Who Hobbled Hubble? 133

Backyard Astronomy —
Rate Your Observing Site, 262
Spring Galaxy Star-Hop, A, 370

Books and the Sky —
Amateur Astronomer, The, Patrick Moore, 164
Astronomer's Universe, The, Herbert Friedman, 162
Atlas of Galactic Nebulae, Part 3, Thorsten Neckel and Hans Vehrenberg, 386
Big Splash, The, Louis A. Frank with Patrick Huyghe, 498
Briefly Noted, 47, 167, 279, 390, 501, 611
Colliding Galaxies, Barry Parker, 274
Handbook of Space Astronomy and Astrophysics, Martin V. Zombeck, 278
In the Stream of Stars: The Soviet/American Space Art Book, William K. Hartmann, Andrei Sokolov, Ron Miller, and Vitaly Myagkov, editors, 497
Introduction to the Solar System, Jeffrey K. Wagner, 607
Journey into Gravity and Spacetime, A, John Archibald Wheeler, 42
Lonely Hearts of the Cosmos, Dennis Overbye, 609
Men, Monsters and the Modern Universe, George Lovi and Wil Tirion, 272
New Solar System, The, J. Kelly Beatty and Andrew Chaikin, 160
Origin of Comets, The, M. E. Bailey, S. V. M. Clube, and W. M. Napier, 384
Origins: The Lives and Worlds of Modern Cosmologists, Alan Lightman and Roberta Brawer, 44
Seeing the Sky, Fred Schaaf, 610
Touring the Universe Through Binoculars, Philip S. Harrington, 278
Visions of Space, David A. Hardy, 43

Celestial Calendar —
America's Last Pleiades Occultation, 292
Calendar Notes, 77, 185, 300, 407, 520, 635
Ceres near Spica, 523
Comets This Month, 297
Difficult Occultation of Mars, A, 294
Grand Conjunction Day by Day, The, 630
Great July Solar Eclipse, The, 71
Jupiter Satellite Events, 77, 184, 300, 407, 520, 634
Jupiter's Satellites, 64, 178, 290, 402, 514, 628
Keeping a Celestial Calendar, 410
Lunar Occultation Highlights for 1991, 68
Lutetia Flies by M95, 516
Moonwatcher's Corner, 78, 191, 296, 410, 522, 638
Mutual Events of Jupiter's Satellites, 76
Naked-Eye Occultation of Antares, A, 180
1991 Planet Preview, A, 66
Observing Saturn in 1991, 404
Pallas near Regulus, 410
Planetary Occultations of Stars in 1991, 72
R Serpentis at Maximum, 517
Sun, Moon, and Planets in . . . (current month), The, 64, 178, 290, 402, 514, 628
Sunrise on Ptolemaeus, 631
Two Asteroids near Jupiter, 183
Venus in the Evening Sky, 188

50 & 25 Years Ago, 6, 126, 256, 350, 462, 574

Focal Point —
Astronomical Literacy, 348
Astronomy as Play, 460
Bring Back the Planetarium, 4
Forgotten Pioneers, 236
Ticked Off about Telescopes, 124
Wanted: Skywatchers, 572

Front-cover photographs —
Astro Goes to Work, 345
Cluster of 100,000 Stars, 121
Galileo's Venus, 233
Hollywood's Milky Way, 457
Hubble's Saturn, 1
New Images of Mars, 569

Gleanings for ATM's —
Career in Optics? 545
Group 70 Update, 548
Masterful Techniques of John A. Brashear, The, 432
My Heated Observatory on Wheels, 647
Observing Seat for Two Telescopes, An, 544
Rebirth of the Snow Telescope, 206
Spherical Aberration: Bane or Boon? 546
Unobstructed Newtonian Telescope, An, 320
Way To Make Giant Worm Gears, A, 95

Images, 248, 368, 480

Letters, 5, 125, 237, 349, 461, 573

News Notes —
American Astronomers: Who Are They? 581
Another Hubble Instrument Goes to Work, 579
Apollo-Catching Made Easy, 357
Are Saturn's Rings New? 245
Asteroid Streams? 467
Astronomers on PBS, 239
Astronomy Express, see separate department
Bart Bok Was Right! 465
Big Bang: Dead or Alive? The, 467
British Astrostamps, 10
Bucky Balls by the Bucket, 463
Comet Halley: Still Active after All These Years? 12
Comets Around Other Stars, 242
Comets Keep Their Cool, 352
Cosmic String or Not? 469
Dusty Elliptical Galaxy, A, 356
Earth's Cloud Satellites Reported Again, 132
Freak Supernova Remnant, A? 130
Galactic Center Annihilator Caught in the Act, 576
Galactic Collision Remnants, 580
Galileo's Australia, 466
Germs in Space? 357

Ulysses Nods Off, 244
Varied Ages of Globular Clusters, 11
Vietnam Memorial Sundial, 354
What Time Is Sunset? 131
Wyoming's New Interferometric Telescope, 358
X- and Gamma Rays from Type Ia Supernovae, 9
Young "Globular" Clusters? 468

Observer's Page —
Astrophotography with Telephoto Lenses, 219
Choosing Your Telescope's Magnification, 553
Color Astrophotography with Small Telescopes, 664
Comet Digest, 106, 447, 666
Deep-Sky Wonders, 110, 223, 333, 444, 670
Gallery, 112, 224, 336, 448, 560, 672
Last July's Cloudy Solar Eclipse, 104
Observer's Guide to Diffuse Nebulae — III, An, 440
Sunspot Numbers, 111, 223, 334, 446, 559, 671
Testing Kodak's New Films for Deep-Sky Photography, 328

Rambling Through the Skies —
Being Weather-Wise, 287
Big Dipper Breakthrough, A, 399
Commentary on Cancer, A, 175
Eclipse-Trip Stargazing, 621
Middle Eastern Perspective, A, 57
Saros Chasers, 511
***S&T* Test Report —**
"New, Improved" Portable Observatory, A, 495
Next-Generation Telescope for Amateurs, The, 35
Powerful CCD Camera for Amateurs, A, 257
Update on Schmidt-Cassegrain Telescopes, An, 601
Southern Stars for . . . (current months), 56, 286, 510
Stars for . . . (current month), 58, 176, 288, 400, 512, 622

Selected Topics and Celestial Objects

This listing is not intended to be exhaustive and does not supplant the other parts of the index. For example, material in such regular features as Books and the Sky is ordinarily indexed only under the Departments and Features section.

Amateur activities: amateur contributions, 538; Association of Binary Star Observers, 425; asteroid observers' newsletter, 183; *The Astronomer* network, 656; Astronomy Day 1990, 536; Astronomy Ireland, 423; doing professional work, 656; Elderhostel program, 215; French effort to view July, 1990, total solar eclipse, 87; Group 70's plans, 548; "hill of six suns" in France, 425; Houston amateurs observe lunar occultation of Jupiter, 423; involvement with Astro 1 shuttle mission, 426, 591; Messier marathons, 670; meteor observing projects, 478; notable telescope making ideas, 31; photographing Space Shuttle fuel tank reentry, 425; search for Tombaugh's variable in Corvus, 89; shadow-band observing project, 482; simple telescopes for students, 311; Swedish amateurs and CCD imaging of the Sun, 424; Clyde Tombaugh awarded Rittenhouse Medal, 423; tornadoes near Ohio's Warren Rupp Observatory, 424

Archeoastronomy: Stonehenge, 582

Art: British postage stamps, 10; Don Davis' primordial Earth, 351; David Hardy scene from Io, 43; Paul Hudson's *Flags on Mars,* 497; Josef Minsky's *Oh, God, How Tired I Am,* 498

Asteroids (minor planets): detecting Earth-crossing, 357; discovered by amateurs, 538; 15 Eunomia, 183; 21 Lutetia, 516; Mars Trojan, 12; 9 Metis, 183; *Minor Planet Observer* newsletter, 183; 1990 DA, 538; 1990 MB, 12; 1991 BA, 357, 359; 2 Pallas, 410; 25 Phocaea, 635; 3243 Skytel, 354; smallest yet found, 359; source for meteor showers? 467

Astrometry: performed by amateurs, 657

Astronomical constants: cosmological constant, 362; Hubble parameter, 255

Atmospheric phenomena: exploring properties of rainbows by computer, 199; great conjunctions of Jupiter and Saturn, 305; monitoring the weather, 287; refraction and the time of sunset, 131

Auroras: artificial, 575

Balloon astronomy: stratospheric research, 128

Bioastronomy: interstellar dust grains as microscopic life, 357; NASA's SETI program funds reinstated, 13; SETI projects, 238

Black holes: see ***Collapsed objects***

Chemistry: carbon-60 molecules, 463

Collapsed objects: black hole search in M15, 579; centrifugal force near a black hole, 243; in galactic center, 576; pulsars in globular clusters, 28

Comets: around other stars, 242; Austin, 352; discoverers, 470, 476, 538, 658, 666; Faye, 106; Halley, 12, 246, 470; Hartley 2, 106; Levy (1990c), 17, 106, 297, 352, 591; Machholz, 106; Metcalf-Brewington (1991a), 447; for 1991, 106; ultraviolet observations, 591; Wild 2, 106, 297; Wirtanen, 106

Computing: CCD image processing, 257; Columbus' celestial observations, 81; discrete Fourier transform program, 573; exploring properties of rainbows, 199; long-enduring fireballs, 640; Ronchi patterns for a specific mirror, 416; simulating three-dimensional jets, 129; telescope focus and collimation, 528

Conjunctions: historical events of Jupiter and Saturn, 305; June, 1991, of Venus, Mars, and Jupiter, 628

Constellation study: Big Dipper, 399; book on, 272; of Mesopotamians, 57; origin of Cancer, 175

Cosmic background radiation: X-ray background, 466

Cosmology: anthropic principle, 366; basic tutorial, 250; Big Bang, 250, 467; cosmic strings, 469; cosmological constant, 362; "look-back" times, 255; "non-velocity" redshifts, 373; redshifts, 252

Dark matter: tau neutrino, 595

Detectors: gamma-ray, 488, 576

Eclipses:

Lunar: June 27, 1991, penumbral, 635

Solar: July 21-22, 1990, total, 87, 104; January 16, 1991, annular, 77; July 11, 1991, total, 462, 511, 621; saros cycles, 511; shadow bands, 482

Education: "The Astronomers" television series, 239, 472; astronomical literacy, 348; Astronomy Day 1990, 536; Elderhostel program, 215; For Spacious Skies program, 572; making science interesting, 573; Mission to Mars exhibition, 464; *Optics Education* booklet, 545; simple telescopes for students, 311; "star dancing" for teaching children, 238; using planetariums effectively, 4, 461

Galaxies:

Active: M87's jet, 463; NGC 1068, 17; starburst remnants in NGC 1569, 353; strong iron emitters, 246

Clusters of: Abell 496, 595; gravitational lensing in, 378; hot gas in, 595; huge galaxy at center of Abell 2029, 127

Interacting: M51, 370; NGC 4485, 372; NGC 6240, 241; remnants of in NGC 2782, 580

Local Group (see *Milky Way* and ***Magellanic Clouds***)**:**

Milky Way: galactic center candidates, 13, 463, 576; gamma-ray emission map, 489; infrared view of, 242

"Normal": dusty elliptical, 356; dusty spirals, 240; globular clusters around, 148, 468; IC 342, 223; M31, 469; M63, 371; M81, 359, 373; M83, 240, 468; M87, 149, 463; M94, 372; M104, 151; M106, 372, 444; NGC 309, 373; NGC 1399, 595; NGC 1819, 111; NGC 1924, 111; NGC 2642, 671; NGC 2713, 671; NGC 2763, 671; NGC 2781, 671; NGC 2811, 671; NGC 2848, 671; NGC 2851, 671; NGC 2855, 671; NGC 2889, 671; NGC 2962, 671; NGC 2992, 671; NGC 2993, 671; NGC 3109, 671; NGC 3115, 333; NGC 3145, 671; NGC 3166, 335; NGC 3169, 335; NGC 3200, 671; NGC 3242, 671; NGC 4449, 372; NGC 4485, 372; NGC 4490, 372; NGC 5005, 372; NGC 5033, 372; NGC 5198, 371; NGC 7052, 356; NGC 7619, 150; size of spirals, 373; ultraviolet view of M83, 486; young star clusters in, 468

Superclusters of: Great Attractor, 355

Gamma-ray astronomy: emission from Supernova 1987A, 9; galactic center, 576; gamma-ray bursters, 11; Gamma Ray Observatory, 488

Gravitation: cosmic strings, 469; Einstein rings and arcs, 377; gravitational lensing, 375, 469; microlensing, 377; wormholes, 365

H II regions: of M42, 239; young star clusters in M83, 468

Herbig-Haro objects: HH 46 and 47, 389

History: Columbus' celestial observations, 81; comet discoverer William R. Brooks, 476; discovery of Pluto, 360; early astronomy in the Middle East, 57; fireballs, 642; light echoes of Nova Persei 1901, 153; original Flamsteed numbers, 380

Hubble Space Telescope: Aldebaran, 580; blame for optical error, 133; first results, 14; flaws and remedies, 19, 470, 546; image of M42, 239; image quality improved, 247; Mars observation, 471; pointing-control failure, 247; quasar observation, 579; radiation impact on, 138; repair mission, 470; Saturn's Great White Spot, 144; searching for black hole in M15, 579; witness sample, 7

Image processing: budget CCD camera, 257

Infrared astronomy: Australia from space, 466; Milky Way's center, 463; solar observations, 132; star formation from Bok globules, 465; view of Milky Way, 242

Interferometry: Wyoming Infrared Michelson Array, 358

Intergalactic matter: hot gas in galaxy clusters, 595

Interplanetary matter: zodiacal light, 461

Interstellar matter: dust grains as microscopic life, 357; graphite grains, 593; seen in infrared, 242

Light pollution: 262; Pleiades star watch, 133

Magellanic Clouds: giant dust ring around 30 Doradus, 8; globular clusters in, 28; new distance to, 359

Meteorites: ancient killer meteorite, 238; on gravestone, 383

Meteors: asteroids as source, 467, 478; historical fireballs, 642; observing project, 478; showers, 468; simulating long-enduring fireballs, 640; sunset showers, 478; taking spectra, 479

Molecules: carbon "fullerenes," 463; hydrogen sulfide and methanol in comets, 352

Moon: east and west on, 191; Galileo flyby, 269; lunar transient phenomena, 265; metal-rich core, 582; Schröter's dome, 6; sightings of thin crescent, 5, 573; titanium-rich minerals, 576; walled plain of Ptolemaeus, 631

Nebulae:

Bright: Barnard's Loop, 110, 368; cometary globule, 388; Cygnus Loop, 596; M1 (Crab), 352; M42 (Orion), 111, 239; M78, 440; NGC 2064, 441; NGC 2067, 440; NGC 2071, 440; NGC 2170, 441; NGC 2182, 441; NGC 2183, 441; NGC 2185, 441; NGC 2245, 441; NGC 2261, 441; NGC 2316, 443; NGC 2359, 443; NGC 2467, 443; North America, 480; Rosette, 223; unusual supernova remnant, 130; van den Bergh 68 and 69, 441

Dark: Bok globules, 465; Horsehead, 111

Planetary: NGC 2610, 671

Neutron stars: see ***Collapsed objects***

Novae: R Aquarii, 16; discovered by amateurs, 538; in M14, 14; Nova Persei 1901's light echoes, 153

Observatories (amateur and public): portable, 495; Warren Rupp, 217, 424; William Volna's heated portable, 647; Warsaw University, 5

Observatories (professional): Australia Telescope National Facility, 351; Calar Alto, 599; new dome designs, 577; Palomar, 598; Pic du Midi, 583

Observing techniques: rating an observing site, 262; shadow bands, 482; sky sweeping, 237; solar filters, 71; telescope magnification, 553; viewing zodiacal light, 461

Occultations: August 18, 1990, lunar, of Jupiter, 423; January 3, 1991, stellar, by Vesta, 72; February 8, 1991, lunar, of Antares, 180; March 20, 1991, lunar, of Pleiades, 292; March 22, 1991, lunar, of Mars, 294

Optics: blame for Hubble Space Telescope flaw, 133; combination focal reducer and image corrector, 604; computing ideal Ronchi patterns for a specific mirror, 416; computing telescope focus and collimation, 528; exploring properties of rainbows by computer, 199; field flattener, 604; flint-forward doublets, 432; HST's witness sample, 7; image core size, 237; novel designs of John A. Brashear, 432; *Optics Education* booklet, 545; spherical aberration, 546; spinning 8.6-meter mirrors, 470; telescope magnification, 553; test of 10-inch commercial mirrors, 350; University of Arizona mirror laboratory, 470; unobstructed Newtonian reflector design, 320

Organizations: American Association of Variable Star Observers, 592; American Astronomical Society survey, 581; Association of Binary Star Observers, 425; International Space Year, 243; W. M. Keck Foundation, 472; Meade-Celestron merger blocked, 356; Soviet Astronomical Society, 358

People: Baggett, B., 472; Baker, P., 473; Bennett, J. C., 666; Bernasconi, A., 424; Blitz, L., 473; Brashear, J. A., 432; Brooks, W. R., 470, 476; Chamberlain, R., 474; Coleman, S., 365; Columbus, C., 81; Couderc, P., 153; Dobson, J., 472; Einstein, A., 362; Flamsteed, J., 380; Giacconi, R., 18; Goldsmith, D., 473; Hawking, S., 10, 364; Honda, M., 670; Ingalls, A. G., 140; Kapteyn, J., 153; Krisciunas, K., 474; Manning, B., 656; Marsden, B., 656; Masursky, H., 130; Mueller, J. (Regiomontanus), 82; Peltier, L. C., 314; Pepys, S., 642; Perrine, C., 153; Porter, R. W., 140; Proctor, R. A., 399; Ritchey, G., 153; Shoe-

maker, C., 470, 658; Terrile, R., 474; Tombaugh, C., 89, 360, 423; Wolf, M., 153

Photography: CCD camera, 257; spherical aberration and, 546; testing color emulsions for deep-sky, 328; in ultraviolet light, 591; using small telescopes, 664; using telephoto lenses, 219

Physics: centrifugal force near a black hole, 243; cosmological constant, 362; effects of charged particles, 137; Theory of Everything, 365; wormholes, 365

Planetariums: effective use of, 461; purpose of, 4

Planets and their satellites:

Earth (see also ***Moon***)**:** Australia in infrared from space, 466; chemical releases in magnetosphere, 575; Galileo flyby, 269, 466; Kordylewski cloud satellites, 132; primordial atmosphere, 351; South Atlantic Anomaly, 134; Van Allen radiation belts, 134

Extrasolar: around Epsilon Aurigae? 127

Jupiter: conjunction with Venus and Mars, 628; detailed ground-based images, 583; Ganymede, 583; great conjunctions with Saturn, 305; imaged in polarized light, 8; internal oscillations, 357; satellite mutual events, 185, 300, 408, 520; sodium cloud, 247

Mars: best view of Olympus Mons, 248; conjunction with Venus and Jupiter, 628; detailed ground-based images, 583; "Face on Mars" stamp, 575; HST image, 471; Mars '94's balloon experiment, 241; rovers to explore surface, 582; snow on? 9, 13; traveling exhibition, 464; Trojan asteroid of, 12

Neptune: satellites named, 13

Pluto: Charon mutual events end, 13; discovery of, 360; HST image of, 16

Saturn: age of rings, 245; great conjunctions with Jupiter, 305; Great White Spot, 144, 404, 538; HST images of, 15, 144; moons made of rubble, 245; Titan's rotation and orbital periods, 358

Venus: conjunction with Mars and Jupiter, 628; Galileo flyby, 269; names needed for features, 582

Pulsars: see ***Collapsed objects***

Quasars: HST observation, 579; BL Lacertae objects, 595; magnetic jet of 0800 + 608, 7; strong iron emitters, 246; twin quasar, 376; ultrafast outburst, 359

Radar astronomy: Titan's rotation and orbital periods, 358

Radio astronomy: galactic merger remnants, 580; M87's jet, 463; supernova remnant in Large Magellanic Cloud, 351

Rocket astronomy: young star clusters in M83, 468

Science policy: astronomy and society colloquium, 470; prospects for astronomy in the next decade, 584, 587

Solar System: search for Planet X, 360

Space-based astronomy: Astro 1 mission, 247, 359, 426, 591; Gamma Ray Observatory, 488; observations by HST, 14, 239, 471, 579, 580

Spacecraft (see also ***Hubble Space Telescope***)**:** Advanced X-ray Astrophysics Facility, 574, 582; Astro observatory, 247, 359, 426, 591; Combined Release and Radiation Effects Satellite, 575; Cosmic Background Explorer, 242; Dynamics Explorer 1, 498, 582; Galileo, 247, 269, 466; Gamma Ray Observatory, 488; Granat, 576; Mars '94's balloon experiment, 241; Pioneers 10 and 11, 236, 244; radiation exposure for humans in orbit, 136; radiation impact on, 134; Rosat, 466, 470; rovers on Mars, 582; Salyut 7 reentry, 578; Ulysses, 128, 244, 465, 470; Viking, 248; visibility of geostationary satellites, 126

Space debris: findings of study on, 581

Space policy: International Space Year, 243; scheduling launch for Astro observatory, 596

Star clusters:

Globular: ages of, 11, 468; Omega Centauri in ultraviolet light, 592; M14, 14; M15, 579; in Magellanic Clouds, 28; Mayall II, 152; NGC 2419, 148; of other galaxies, 148, 468; overview, 24; pulsars in, 27

Open: M48 (NGC 2548), 670; NGC 1502, 223; NGC 2232, 223; Tombaugh 5, 223

Stars: formation from Bok globules, 465; proper motion, 399

Double and multiple: brightest eclipsing binaries, 598; Z Camelopardalis, 593; cataclysmic binaries, 353, 593; Cor Caroli (Alpha Canum Venaticorum), 372; Beta Persei, 598; Gamma Persei, 598

Individual: Aldebaran's ultraviolet spectrum, 580; Chi Lupi's peculiar chemical composition, 17; white dwarf "optical clock," 12

Variable: Epsilon Aurigae, 127; Z Camelopardalis, 593; Y Canum Venaticorum, 372; cataclysmic binaries, 353, 593; Omicron Ceti (Mira), 573; Z Chamaeleontis illustration, 354; Theta' Orionis A, 189; T Pyxidis, 185; R Serpentis, 517; Tombaugh's variable in Corvus, 89

Sun: Cycle 22, 21; infrared image, 132; shadow bands at total eclipse, 482; solar filters, 71; solar wind, 465; sunspot-cycle predictions, 23

Sundials: Vietnam memorial in Kentucky, 354

Supernovae: discovered by amateurs, 538; gamma- and X-ray emission from SN 1987A, 9; remnant in Large Magellanic Cloud resembles Crab nebula, 351; SN 1987A, 19, 359; unusual supernova remnant, 130

Telescope making: aligning a reflector's primary mirror, 31; computing ideal Ronchi patterns for a specific mirror, 416; computing telescope focus and collimation, 528; expensive eyepieces, 124; Group 70's plans, 548; magnification, 553; making a large worm gear from rack material, 95; motorized observing chair, 33; observing chair, 544; pet peeves about commercial scopes, 124; right-angle finders, 124, 574; rubber-band eyepiece grip, 126; setting circles for Dobsonian, 32; simple telescopes for students, 311; start of ATM movement in United States, 140; telescope making firm of John A. Brashear, 432; test of 10-inch commercial mirrors, 350; "triangulator" for aiming binocular telescope, 33; unobstructed Newtonian reflector design, 320

Telescopes (amateur): astrophotography using small apertures and fast film, 664; combination focal reducer and image corrector, 604; field flattener, 604; Group 70's plans, 548; Klein's 8-inch Newtonian, 544; Kramer's ½-inch refractor, 34; Lareau's and Wessling's 8-inch schiefspieglers, 31; Meade-Celestron merger blocked, 356; Messner's 18-inch reflector, 34; Moffat's 17½-inch reflector, 34; Next Generation Telescope review, 35; periodic-error-correcting drives, 601; Sasian's 6-inch unobstructed Newtonian, 320; Volna's 6-inch refractor and observatory, 647; Watkins' 13.1-inch reflector, 31; Wright's 17½-inch Newtonian, 95

Telescopes (professional): Keck (10-meter), 129, 133; Snow Solar, 206; University of Arizona mirror laboratory, 470; Very Large Telescope (16.4-meter), 133, 470

Ultraviolet astronomy: Aldebaran, 580; Astro 1 mission, 247, 359, 591; Omega Centauri, 592; neutrino as missing mass, 595; stellar spectra, 593; young star clusters in M83, 468

Very large-scale structure: Great Attractor, 355

Vision: and telescope magnification, 553

X-ray astronomy: Astro 1 mission, 247, 591; AXAF Science Center, 582; cosmic background, 466; diffuse source in galaxies, 595; emission from Supernova 1987A, 9; hot gas in galaxy clusters, 595; BL Lacertae objects, 595

BUILD THIS 11" RESEARCH-QUALITY WORM WHEEL CLOCK DRIVE YOURSELF

COMPLETE FULL-SCALE PLANS AND INSTRUCTIONS

$19.95

OR PURCHASE ANY OR ALL PARTS FROM OUR SHOP. KIT CONTAINING ALL PARTS READY TO BORE TO YOUR SHAFT SIZE.

$495.

$11^{7}/_{32}$"D. 359 TOOTH WORM WHEEL, GROUND S.S. WORM. 120V. 60H_Z SYNCHRONOUS MOTOR, SIDEREAL RATE. INCLUDES ADJUST. TORQUE CLUTCH. FITS SHAFTS TO $3^{3}/_{4}$"D.

STARPORT

Imagine holding the universe in the palm of your hand!
You can with STARPORT — the *ultimate* computer sky atlas.

STARPORT changes the rules of observing. Instead of reading numbers from standard or digital setting circles, you actually see stars on the display! You can instantly get information about anything on the screen with a touch of your finger, and you can use the starfield display to star hop or let STARPORT *visually guide you* to your destination!

- **PORTABLE**
- **EASY TO USE**
- **LED DOT-MATRIX DISPLAY**
- **TOUCH-SCREEN OPERATION**

- **NO POLAR ALIGNMENT**
- **40,000+ STARS to mag 8.0**
- **10,000 DEEP-SKY OBJECTS**
- **88 CONSTELLATIONS**
- **8 PLANETS**

STARPORT lets you find anything in the sky by selecting its name, coordinates, constellation, or Messier, NGC or IC number. The entire computer is 7" x 7" x 3" and weighs only 2 ½ pounds. STARPORT is a versatile instrument with or without a telescope, and you can even use STARPORT with several telescopes at the same time — great for star parties!

Call or write for more information. Price $895, w/telescope encoders $1295.
